MICROFILM CORP.

Methylene Blue
Analysis

Customer Name: Micose Inc

Address: 100 Clamont Ave. Bensalem, PA. 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than (<) 1.4 µg (micrograms) indicate archival quality, and greater than (>) 1.4 µg indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

TEST IDENT.	ACTUAL CONCENTRATION	MEETS ANSI STANDARD (<) 1.4 µg	DOES NOT MEET ANSI STANDARD (>) 1.4 µg

		☐	☐

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI Standard IT9.1-AS. "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 µg for residual thiosulfate.

A close-up photograph of a small, square electronic component, likely a microcontroller or sensor module. It features a grid of pins on one side and several numerical labels (20, 22, 23, 24, 25, 26, 27, 28, 29, 30) printed on its surface, possibly indicating pin numbers or component identifiers.

A close-up photograph of a white rectangular label with black markings. The label features a series of vertical bars of varying heights, resembling a barcode or a specific labeling system. Below these bars are four distinct numerical labels arranged horizontally: "20", "22", "23", and "24". Each number is positioned directly beneath its corresponding set of bars. The background of the entire page is a light gray grid pattern.

A close-up photograph of a 20-pin connector on a circuit board. The pins are arranged in two rows of ten. The top row is labeled with numbers 1 through 10, and the bottom row is labeled with numbers 11 through 20. The connector is a standard D-subminiature type, commonly used for interfacing with various electronic components.

A close-up photograph of a small, square electronic component, likely a microcontroller or sensor, showing a grid of pins and numerical markings (20, 22, 23, 24) on its surface.

20
22
23

[illegible]

A close-up photograph of a small, square electronic component, likely a microcontroller or sensor, with a grid of pins. The component has several numerical markings: '24' in the top right, '23' in the top center, '22' in the bottom center, and '20' in the bottom left. The component is mounted on a printed circuit board.

[illegible]

A close-up photograph of a portion of a 3x6 grid of numbered squares. The visible numbers are 1 through 20, arranged in three rows. The top row contains numbers 1 through 6, the middle row contains 7 through 12, and the bottom row contains 13 through 18. The numbers are printed in a bold, sans-serif font on a light-colored background.

MICROFILM CORP.

Methylene Blue
Analysis

Customer Name: MICOR FILMAddress: 100 EIGHTH AVE. BENSALEM, PA 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than (<) 1.4 µg (micrograms) indicate archival quality, and greater than (>) 1.4 µg indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

TEST IDENT	ACTUAL CONCENTRATION	MEETS ANSI STANDARD (<) 1.4 µg	DOES NOT MEET ANSI STANDARD (>) 1.4 µg
100-1000	1.7		
1000-10000			

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI Standard IT9.1-AS: "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value" This same Standard sets the archival limit at 1.4 µg for residual thiosulfate.
